Note: The last digit of the Model Number _ indicates desired electrical service (60Hz, 50Hz). See the Specification Chart for details. Specify voltage/Hz when ordering.

---

**Main Features**

- **Unique Esco Dynamic Chamber ™ plenum design** delivers quiet, uniform airflow.
- Negative pressure plenum surrounds contaminated positive pressure plenum; no fabric bags are used.
- Dual, long-life ULPA filters for supply and exhaust airflow.
- Low cabinet power consumption, reduced heat output, delivers lower total cost of ownership. (refer to graph on page 3)
- Esco Sentinel ™ microprocessor supervises all cabinet functions.
- Ergonomically angled front improves reach and comfort.
- Actual work opening is 25.4 mm (1") larger than tested sash opening to provide additional work space.
- Frameless, shatterproof sash is easier to clean, offers larger, unobstructed viewing area.
- Removable one-piece work surface simplifies cleaning (applicable to AC2-S series and AC2-D series).
- E-Series cabinets include multi-piece tray components which lift and remove to provide easy access encourage surface decontamination and can be sterilized inside autoclave.

Power Consumption Comparison Chart

The Esco AC2 cabinet utilizes an extremely efficient backward curve fan, allowing for exceedingly low levels of cabinet power consumption that is unparalleled in the industry.

The result is greater cost-savings for the user with no compromise in cabinet performance.
Biological Safety Cabinets • Class II Biological Safety Cabinets (E-Series, S-Series and D-Series)

Esco Airstream Class II Biological Safety Cabinets offer a premium level of operator, product and environmental protection with advanced technology at an economical price. Intelligent, ergonomic design enhances productivity, operator comfort, maintenance and utility value. With an extensive track record of safety, reliability and performance, Airstream cabinets make ideal investments for a wide range of general laboratory applications. Airstream biological safety cabinets provide protection against Biosafety Levels 1, 2 and 3 and can be used for handling Biosafety Level 4, provided that the operator wears a positive pressure suit.

Containment and Protection

A combination of a supply ULPA filter and an exhaust ULPA filter create a fully integrated performance envelope for product, operator and environmental protection.

- Inflow of room air enters the front air grille to establish operator protection; room air does not enter the work zone, preventing product contamination.
- Raised armrest prevents the likelihood of inflow grille blocking by operator’s arms.
- Auto-purge holes located at the front side walls (on AC2-S Series) eliminate eddy currents and dead air pockets in the critical area behind the sash window.
- The inflow velocity, downflow velocity, air flow path and intake geometry are precision tuned and tested to create an optimum air curtain on the front aperture; this curtain maintains personal and product protection even in the unlikely event of a severe inflow or downflow imbalance that would compromise protection in a conventional cabinet.

Integrated Filtration System

Independent supply and exhaust filters provide 99.999% typical efficiency for particle sizes of 0.1 to 0.3 microns. Airstream filters meet the IEST-RP-CC001.3 recommended practice for ULPA performance (USA), and EN 1822 for H14 performance (EU).

- ULPA filters (per IEST-RP-CC001.3), are tested to a typical efficiency of >99.999% for 0.1 to 0.3 micron particles; these provide better filtration capability than conventional H13 HEPA filters that have a typical efficiency of > 99.99% for 0.3 micron particles.
- Modern separatorless mini-pleat filter construction maximizes the filter surface area to extend filter life and eliminate possible filter media damage by thin and sharp aluminum separators used in conventional HEPA filter construction.

Single Blower System, Airstream S-Series and E-Series Models

The AC2 blower system is designed for high performance operation, maximum energy efficiency and minimal maintenance.

- Industry exclusive backward curved, motorized impeller design replaces conventional blowers.
- Improved energy efficiency lowers operating costs.
- Reduced noise and vibration levels over conventional blowers provide a comfortable working environment.
- An integral blower hour meter tracks operating life and aids in predictive maintenance planning.
- Built-in RFI and electrical noise filters eliminate interference with adjacent instrumentation.
- The external rotor motor design allows for optimum cooling of the motor during extended operations and extends the motor bearing life.
- Speed can be adjusted electronically without the need for mechanical adjustment.
- To prevent fan damage, a paper-catch grille traps papers or towels that may drop down on the drain pan, preventing them from being pulled into the column by fan suction.

Dual Blower System, Airstream D-Series Duo Models

The Airstream Duo includes a dual blower system designed for redundancy.

- Dual permanently lubricated direct-drive external rotor motor/blowers assure cabinet safety in the event of a motor failure.
For Air Quality

- Type-tested to EN 12469, Europe
- ISO 14644.1 Class 3, Worldwide
- IEST-G-CC1001, USA
- IEST-G-CC1002, USA

For Filtration

- IEST-RP-CC034.1, Worldwide
- IEST-RP-CC007.1, Worldwide
- IEST-RP-CC001.3, Worldwide
- EN 1822, Europe

For Electrical Safety

- IEC 61010-1, Worldwide
- EN 61010-1, Europe
- UL 61010-1, USA
- CAN/CSA C22.2 No. 61010-1

* For details on most recent certifications contact Esco or your Esco Sales Representative.

### Standards Compliance

- **For Microbiological Safety Cabinets**
  - Type-tested to EN 12469, Europe
  - ISO 14644.1 Class 3, Worldwide
  - IEST-G-CC1001, USA
  - IEST-G-CC1002, USA
- **For Air Quality**
  - IEST-RP-CC034.1, Worldwide
  - IEST-RP-CC007.1, Worldwide
  - IEST-RP-CC001.3, Worldwide
  - EN 1822, Europe
- **For Filtration**
  - IEC 61010-1, Worldwide
  - EN 61010-1, Europe
  - UL 61010-1, USA
  - CAN/CSA C22.2 No. 61010-1

---

**Front Sash Assembly**

The front sash is counterbalanced for convenient one-hand operation.

- The frameless sash eliminates operator’s line of sight blockage.
- A generous sash opening allows for easier access into the work zone.
- The sliding window can be fully opened to insert and remove larger instrumentation and equipment.

**Sentinel™ Microprocessor Control, Alarm, Monitoring System**

The Esco Sentinel™ microprocessor-based control system supervises operation of all cabinet functions.

- The control panel is located on the center of the cabinet, and angled down for easy access by the operator.
- Continuous monitoring of cabinet airflow is displayed on a bright, easy-to-read LCD panel. The large display monitors operational parameters.
- A true airflow velocity sensor provide independent measurement of inflow and downflow velocities despite room temperature fluctuation.

- All electronic parts are contained inside a plug-and-play module that permits easy exchange if required.
- Microprocessor software updates are available from Esco for download via the Internet.

Consult your Esco Operating Manual or contact Esco or your Sales Representative for information on user-preference programming capabilities built into the Sentinel microprocessor platform.

**Cabinet Construction**

Robust construction and enhanced safety features qualify the cabinet for the most demanding laboratory applications. The cabinet is fully assembled and ready to install and operate when shipped.

- The cabinet work zone has no welded joints to collect contaminants or rust.
- All stainless steel work surfaces are accessible for cleaning.
- S Series cabinets (stainless steel sides) include interior sides and back wall formed from a single piece of stainless-steel with large radius corners to simplify interior cleaning.
- E Series cabinets (tempered glass sides) include multi-piece tray components which lift and remove to provide easy access and to encourage surface decontamination.
- A recessed central area and drain pan channels spills and prevent liquids from entering the lower filtration and blower systems.

- The drain pan is flush with the side walls to eliminate concealed or hard-to-clean spaces.
- There are no screws on the front or sides to trap contaminants or complicate cleaning.
- External surfaces are coated with Esco Isocide™ antimicrobial coating to protect against surface contamination and inhibit bacterial growth. Isocide eliminates 99.9% of surface bacteria within 24 hours of exposure.

**Service Fitting Access**

The cabinet is prepared for easy installation of optional gas and vacuum fittings; see Specifications.

- Optional service fittings openings are offset for easier access.

**Comfortable Ergonomic Design**

The cabinet is engineered for comfort, utility value and safety.

- The angled viewing window and narrow profile front grille improves reach into the work area.
- The instant-start 5000k fluorescent lamp operates on an electronic ballast to reduce heat, improve comfort and conserve energy.
- The lamp delivers uniform lighting to the work surface for greater comfort, reduced glare and improved productivity; see Specifications.
- The front armrest is raised above the work zone to improve comfort and to minimize blockage of forward airflow perforations.
- The optional adjustable support stand provides work surface height control.
- The frameless sash eliminates operator’s line of sight blockage.
- A generous sash opening allows for easier access into the work zone, provides ample room for transferring of small equipment; see Specifications.
- The sliding window can be fully opened to insert and remove larger instrumentation and equipment.

---

**Esco Centrifugal Fan with External Rotor Motor (left) vs. Conventional Fan with Standard Motor (right)**

- Esco Airstream cabinets use a combination of high performance scroll blowers (supply) and German made ebm-papst® permanently lubricated centrifugal motor blowers with external rotor designs (exhaust).
- Selected for energy efficiency, compact design, and flat profile, the completely integrated exhaust blower assembly optimizes motor cooling, with unified rotating parts and overall component balance for smooth, quiet, vibration-free operation.
- Weight is equally distributed to all bearings to extend bearing life, transfer heat and maximize speed control.

---

**Esco World Class, Worldwide.**
### Electrical Safety and Certification

All components meet or exceed applicable safety requirements.
- Each cabinet is individually factory tested for electrical safety.
- Documentation specific to each cabinet serial number is maintained on file.
- Certified to major world standards for microbiological safety cabinets, including the EN12469 (refer to technical specifications for the full list).
- Contact Esco or your local Sales Representative for site preparation information; see Electrical Specifications.

### Warranty

Airstream AC2 Series cabinets are warranted for 3 years excluding consumable parts and accessories.
- Each cabinet is shipped with a comprehensive User’s Manual complete with a report documenting all test procedures.
- Additional IQ/OQ/PQ documentation is available upon request.
- Contact your local Sales Representative for specific warranty details or documentation requests.

### Accessories and Options

Esco offers a variety of options and accessories to meet local applications. Contact Esco or your local Sales Representative for ordering information.

#### Support Stands
- Fixed height, available 737 mm (29") or 838 mm (33"), ±38.1 mm (1.5"")
  - With leveling feet
  - With casters
- Adjustable height, hydraulic range 737 mm (29") to 838 mm (33")
  - With casters
- Telescoping height stand, nominal range 737 mm (29") or 838 mm (33")
  - Adjustable in 25.4 mm (1") increments
- Infinitely adjustable cradle stand, with casters
  - Elevates to seating or standing work surface height
  - When lowered permits movement through standard doorway

**Note:** Increases exterior dimensions

#### Electrical Outlets and Utility Fixtures
- Electrical outlet, ground fault, North America
- Electrical outlet, Europe / Worldwide
- Petcock (air, gas, vacuum)
  - North America (American) style
  - Europe / Worldwide style DIN 12898, DIN 12919, DIN 3537

### Cabinet Accessories
- Germicidal UV lamp
  - Controlled by automatic UV lamp timer through Sentinel™ micro-processor control panel
  - Emission of 253.7 nanometers for most efficient decontamination
  - Lamp is positioned away from operator line of sight for safety and proper exposure to interior surfaces.
- PVC armrest
  - Chemically treated, improves operator comfort, easy to clean. 712 mm (28") standard size.
- Ergonomic lab chair
  - Laboratory grade construction, meets Class 100 cleanliness; alcohol resistant PVC materials
  - Adjustable 395-490 mm (15.6”-19.3")
- Ergonomic foot rest
  - Angled, helps maintain proper posture
  - Adjustable height
  - Anti-skid coating, chemical resistant finish
- IV bar, with hooks
  - Stainless steel construction
  - Available for all standard Esco cabinets
- Microscope viewing device
  - Mounting and viewing pouch integrated into sash. Factory installed; specify when ordering.

Ambient air is pulled through the perforations located towards the workzone front to prevent contamination of the work surface and work product. The inflow does not mix with the clean air within the cabinet workzone. Inflow air travels through a return path toward the common air plenum (blower plenum) at the top of the cabinet.

Dual blowers and dual exhaust filters provide an added measure of protection. If the primary blower fails, the secondary blower still pushes the air across the exhaust filters to maintain inflow and containment.

Approximately 32% of the air in the common plenum is exhausted through the ULPA filter to the room. The remaining 68% of the air is passed through the downflow ULPA filter and into the work area as a vertical laminar flow air stream bathing the work surface in clean air.

The uniform, non-turbulent air stream protects against cross contamination within and throughout the work area.

Near the work surface, the downflow air stream splits with a portion moving toward the front air grille, and the remainder moving to the rear air grille. A small portion of the ULPA filtered downflow enters the intake perforations at the side capture zones at a higher velocity (small blue arrows).

A combination of inflow and downflow air streams forms an air barrier that prevents contaminated room air from entering the work zone, and prevents work surface emissions from escaping the work zone.

Air returns to the common air plenum where the 32% exhaust and 68% recirculation process is continued.
### General Specifications, Airstream Class II, Biological Safety Cabinets (E-Series)

### Microbiological Testing

Esco performs testing in accordance with more than 10 of the world’s most recognized standards for local, regional and international criteria.

Testing in our microbiology laboratory is conducted according to NSF/ANSI 49, EN12469, and JIS K3800. An NSF-accredited biohazard cabinet field certifier is available in-house full-time to supervise all testing work, using harmless Bacillus atrophaeus (formerly Bacillus Subtilis) bacteria that is used to challenge the cabinet for the personnel operating inside the work area. All testing work, using harmless Bacillus atrophaeus CFU, are conducted to determine the testing results.

Increased microbiological challenge tests with objects inside the cabinet work zone, Bunsen burner, external airflow disturbance, and Human-As-Mannequin test adapted from Fume Hood development were performed to simulate real-world conditions.

### Personnel Protection Test

The test objective is to evaluate the safety of the cabinet for the personnel operating inside the work zone from environmental contaminants.

- A nebulizer containing 55 mL of 5 to 8 x 10⁶ spores/mL B. atrophaeus spore is placed inside the work zone, 10 cm (4") behind the front opening sash.
- Target slit air samplers and impingers are placed outside the work zone to capture possibly escaping B. atrophaeus spores, then the sample is incubated.
- Acceptance: The number of Bacillus atrophaeus CFU recovered from the agar plates shall not exceed 5 CFU per test.

### Product Protection Test

The test objective is to determine cabinet protection to the product/samples inside the cabinet work zone from environmental contaminants.

- A nebulizer containing 55 mL of 5 to 8 x 10⁶ spores/mL B. atrophaeus is placed at 10 cm (4") in front of sash window.
- Target agar plates are placed throughout the entire work surface.
- Acceptance: The number of Bacillus atrophaeus CFU recovered from the agar plates shall not exceed 5 CFU per test.

** Cabinet only; excludes optional stand.

---

**Cross Contamination Test**

The test objective is to evaluate cabinet protection from cross contamination of samples placed simultaneously inside the work zone.

- A nebulizer containing 55 mL of spores (5 to 8 x 10⁴/mL) is placed against one of the work zone sidewalls.
- Target agar plates are placed 360 mm (14”) away from the same side wall.
- Acceptance: The number of Bacillus atrophaeus CFU recovered on agar plates shall not exceed 2 CFU per test.

**KI Discus Containment Test According to EN 12469 (Potassium Iodide)**

Esco is currently one of the few companies in the world equipped to perform the KI Discus test for our customers. The KI Discus test shows excellent correlation with the microbiological test method for operator protection, and is useful for validating the actual containment performance of the cabinet on-site.

- The KI-Discus takes only 45 minutes as opposed to 2 days for microbiological testing.
- Thus, each Esco Airstream AC2 model is type tested using the KI Discus method for operator safety.
### General Specifications, Airstream Class II, Biological Safety Cabinets (D-Series)

**Note to customer:** Insert electrical voltage number into last model number digits _ when ordering.

**Comprehensive Performance Testing At Esco**

Every Airstream model manufactured by Esco is individually tested, documented by serial number and validated with the following test methods.

- Inflow / downflow velocity
- PAO aerosol challenge for filter integrity
- Light, noise and vibration
- Airflow pattern visualization
- Electrical safety to IEC61010-1
- Additional microbiological testing is performed on statistical sampling basis.
Since 1978, Esco has emerged as a leader in the development of controlled environment, laboratory and cleanroom equipment solutions. Products sold in more than 100 countries include biological safety cabinets, fume hoods, ductless fume hoods, laminar flow clean benches, animal containment workstations, cytotoxic cabinets, hospital pharmacy isolators, and PCR cabinets and instrumentation. With the most extensive product line in the industry, Esco has passed more tests, in more languages, for more certifications, throughout more countries than any biosafety cabinet manufacturer in the world. Esco remains dedicated to delivering innovative solutions for the clinical(78,942),(921,942)
