Compounding Aseptic Containment Isolators  
(Recirculating and Total Exhaust) 
*The Premium Solution for Sterile Hazardous Drug Compounding*
Main Features

- ULPA filters with a typical efficiency of >99.999% at 0.1 to 0.3 microns provide superior ISO Class 3 air cleanliness.

- Sentinel™ Gold Microprocessor controller supervises all functions and monitors airflow and pressures in real-time.

- Work zone and pass-thru interchange are under negative pressure to the room in order to maintain operator protection in the event of a breach in the barrier isolation system.

- Robust dual-wall construction. The work zone is surrounded by negative pressure plenums at the sides and back. Unique Esco Dynamic Chamber™ plenum surrounds filter seals with negative pressure.

- Ergonomically angled front and oval gloveports improve reach and comfort.

- Safe-change cuff rings permit glove changes with zero risk of contaminating the work zone or pharmacy environment.

- One piece work zone liner with no crevices is easy to clean.

- Esco ISOCIDE™ antimicrobial coating on all painted surfaces minimizes contamination.

- Sharps disposal system and hydraulic height-adjustable stand are available as options.
Adjustable Hydraulic Support Stand
The motorized hydraulic stand is adjustable to accommodate user preference for a sitting or standing work positions.

Optional Sharps Disposal System
Optional sharps disposal system enables smoother work flow and minimizes transfers in order to enhance patient protection and sterility. Sharps may be disposed through the work surface into disposal bins while minimizing contamination of the work zone.

Vertical Pass-thru Door
The vertical pass-thru door prevents ingress of contamination into the work zone during transfer procedures. The built-in electrical interlock prevents both doors from being opened at the same time.

Horizontal Tray
The horizontal tray prevents operator fatigue during transfer procedures.

Airlock Pass-thru
The airlock pass-thru ensures work zone remains sterile during insertion and removal of items.

Horizontal Tray
The horizontal tray prevents operator fatigue during transfer procedures.
streamline® | compounding aseptic containment isolator (recirculating)

sterile preparations are compounded. requirements are applicable in all practice settings where compounding of sterile preparations. the chapter’s guidelines, the intent of usp 797 is to set forth the procedural and practical requirements for safe compounding of hazardous, sterile drug preparations in compliance with usp 797* criteria.

barrier isolation systems

barrier isolation systems provide inherently superior sterility compared to open front clean air devices such as laminar flow clean benches and class ii biological safety cabinets. usp 797 guidelines specify that isolators may be situated in an area subject to less severe environmental controls compared to open front clean air devices. when used as part of a system that includes operator aseptic technique training, process validation, expiration setting and product quality maintenance after the csp leaves the pharmacy, isolators are an effective solution especially for lower-volume pharmacies. they reduce operating and renovation costs, take up less space, and are easier to maintain.

the negative pressure, recirculating sci model is suitable for work involving hazardous materials, antineoplastic, or cytotoxic compounding applications. the work zone and pass-thru interchange are under negative pressure to the room in order to maintain operator protection in case of a breach in the barrier isolation system.

when hazardous drugs compounded have the potential to volatilize, the negative pressure, recirculating isolator should be ordered with the optional exhaust activated carbon filter and/or externally vented. alternatively, a negative pressure, total exhaust isolator should be selected.

maximum patient protection and sterility

- the combination of downflow and exhaust ulpa filters gives the esco streamline® compounding isolator a fully integrated envelope for product and operator protection in all configurations.
- advanced mini-pleated supply ulpa filters are tested to >99.999% efficiency for 0.1 to 0.3 micron particulates, significantly better than conventional hepa filters.
- an improved mini-pleat separation technique maximizes filter surface area, improves efficiency and extends filter life over conventional separation.
- the ulpa supply filter provides clean air to the work surface in a gentle vertical laminar flow.
- superior air cleanliness of iso class 3

mini-pleat separatorless filter (left) vs. conventional aluminum separator filter (right)

esco cabinets use swedish camfil farr® mini-pleat filters without aluminum separators to increase filter efficiency, minimize the chance of leakage, and prolong filter life. filters include a lightweight aluminum frame for structural stability and elimination of swelling common to conventional wood frames.

esco filter efficiency

* united states pharmacopoeia (usp), chapter 797(1), enacted january 1, 2004, presents the first enforceable standards for sterile compounding. following years of patient safety recommendations and professional guidelines, the intent of usp 797 is to set forth the procedural and practical requirements for safe compounding of sterile preparations. the chapter’s requirements are applicable in all practice settings where sterile preparations are compounded.

without the operator having to reach into the pass-thru interchange area.

- Oval shaped gloveports improve reach into the work zone compared with conventional circular ports.
- Optional hydraulic stand allows the operator to adjust the work surface height to his/her height, for both sitting and standing operation.
- All common surgical gloves attach to the cuff ring, thereby making the system adaptable to operator preference.
- Instant-start 5000k fluorescent lamps operate on electronic ballasts for energy efficiency. Lamps deliver > 950 Lux (> 88 foot-candles) to the work surface for superior overall illumination.

Cabinet Construction Designed for Easy Cleaning

Robust construction and enhanced safety features qualify the Esco Streamline® Compounding Isolator for the most demanding laboratory applications. The isolator is fully assembled and ready to install and operate when shipped.

- The cabinet interior is constructed of durable and pharmaceutical-grade 304 stainless steel.
- Single-piece stainless steel work surface is easy to clean. Raised edges on all sides contain spillages.
- Stainless steel drain pan below the work surface contains spills.
- The interior work area is formed from a single piece of 304 stainless-steel with large radius corners to simplify cleaning.
- The cabinet work zone has no welded joints to collect contaminants or rust.
- Tray components lift and remove to provide easy access and encourage surface decontamination.
- The cabinet exterior structure is constructed of industrial-grade electro-galvanized steel.
- The downflow ULPA filter is protected by a diffuser which may be cleaned.
- There are no screws on the front or sides to trap contaminants or complicate cleaning.
- Hinged window may be opened for thorough access into the work zone.
- External surfaces are coated with Isocide™ antimicrobial coating to protect against surface contamination and inhibit bacterial growth. Isocide™ eliminates 99.9% of surface bacteria within 24 hours of exposure.
- Cleaning accessories are available from Esco.

Sentinel™ Microprocessor Control, Monitoring System

The Esco Sentinel™ microprocessor-based control system supervises operation of all cabinet functions. Controls are configurable to meet user requirements. Features of the main control panel include:

- Work zone and pass-thru pressures are monitored and displayed on the LCD screen.
- Continuous monitoring and display of cabinet laminar (downflow) airflow on large, easy-to-read LCD display.
- An optional alarm package is available for users with more sophisticated requirements.

Fan Efficiency

The Streamline® Compounding Isolator fan system is designed for maximum energy efficiency and minimal maintenance.

- Centrifugal, direct-drive, external rotor motors reduce operating costs.
- Unique Esco motor/fan orientations minimize noise and vibration.
- Built-in solid-state variable speed controllers are infinitely adjustable from Off to Maximum.
Safety and Certification
All components used in Esco products meet or exceed all applicable safety requirements.
- Each cabinet is individually factory tested for electrical safety.
- Documentation specific to the cabinet serial number is maintained on file.

Warranty
The Esco Streamline® Compounding Isolator comes with a 3-year warranty excluding consumable parts and accessories. Contact your local sales representative for specific warranty details.

Accessories and Options
Esco Streamline® Compounding Isolator is available as a standard bench top unit. Additional accessories are available for further enhancement.

Electrical Outlets and Utility Fittings
- Electrical outlet, ground fault, North America
- Electrical outlet, Euro/Worldwide

Support Stands
- Fixed height, available 711 mm (28") or 864 mm (34")
  - With leveling feet, ±38.1 mm (1.5")
  - With casters (SPC_-_0)
- Telescoping height stand for leveling feet (STL_-_0), nominal range 660 mm to 960 mm (26" to 37.8")
- Telescoping height stand for casters (STC_-_0), nominal range 660 mm to 880 mm (26" to 34.6")
  - Adjustable in 25.4 mm (1") increments
- Infinitely adjustable hydraulic stand, with casters, elevates to accommodate user preference for sitting or standing work surface height (SHM_-_A0)

Esco Centrifugal Fan with External Rotor Motor (left) vs. Conventional Fan with Standard Motor (right)
- Esco cabinets use German made ebm-papst® permanently lubricated, centrifugal motorfans with external rotor designs.
- Integrated blades narrow the profile and eliminate need for a motor shaft.
- Motors are selected for energy efficiency, compact design, and flat profile. The completely integrated assembly optimizes motor cooling.
- All rotating parts are unidized and balanced for smooth, quiet, vibration-free operation.

Compounding Aseptic Containment Isolator (Recirculating)
- Ambient air is pulled through the inlet pre-filter located on top of the isolator. The pre-filter traps larger particles and extends the life of the supply ULPA filter.
- Air from the top inlet and from work zone is pulled by the main fan, which creates positive pressure on the plenum that creates downflow.
- The work zone and pass-thru interchange are under negative pressure to the room.
- The ULPA downflow filter creates a laminar and particle-free ISO Class 3 environment inside the isolator to protect the work material inside the main chamber and pass-thru.
- Air from the work zone and pass-thru is quickly purged by the fans to keep the area clean. The main fan pulls approximately 90% of the purged air back to the plenum and after passing through the ULPA downflow filter again, it is re-circulated back to the work zone and pass-thru. The high rate of airflow re-circulation helps to prolong filter life.
- Approximately 10% of the recirculated air is exhausted through an ULPA filter to prevent heat build-up inside the isolator.
Glove Change Procedure

Step 1: Normal operating condition glove and sleeve inside the isolator.

Step 2: Pull glove and sleeve outside the isolator.

Step 3: Twist sleeve and tie-up the sleeve with tie/band.

Step 4: Remove glove.

Step 5: Place new glove into the sleeve.

Step 6: Fold glove over cuff ring and install spring.

Step 7: Release tie/band.

Step 8: Procedure is complete.

**ISOCIDE™ Antimicrobial Powder-Coating**

All exterior painted surfaces are powder-coated with Esco Isocide™, an antimicrobial inhibitor to minimize contamination. Isocide™ is integrated into the coating substrate and cannot wash out or diminish by repeated cleaning. Performance results are available upon request. Contact Esco or your Esco Sales Representative for details.
Other Options and Accessories
- Electrical outlets
- All stainless steel construction
- UV lamp
- IV bar, with hooks
- Sharps disposal system
- Cleaning accessories
- Alarm package
- Exhaust carbon filter
- Thimble exhaust collar
- Perforated shelf to increase work zone space

Validated Performance
Comprehensive design qualification and factory acceptance tests are performed on the Esco Streamline® Compounding Isolator.

- Filter Leak Tests verify the integrity of the ULPA filters as installed.
- Downflow Velocity Tests verify adequate laminar air flow velocities and air change rates in the main chamber and pass-thru.
- Dynamic Pressure Test determines if main chamber and pass-thru pressures are adequate to aid in providing separation between the main chamber and ambient environment. Glove-pull’s are simulated to ensure differential pressure is maintained during actual operation.
- Particle Counts (Air Cleanliness Tests) verify air cleanliness in accordance with ISO 14644-1 criteria for both the main chamber and pass-thru.
- Product Ingress and Egress Tests determine if the isolator work zone can maintain ISO Class 3, during material transfers with no wait or purge time during the transfer process, when used outside an ISO Class 7 cleanroom, as per USP 797.
- Recovery Time Test determines the amount of time the main chamber takes to recover to ISO Class 3 after an event such as a full window opening or large scale contamination.
- Gauntlet Breach Test determines product protection in case of a glove failure.
- Operator Comfort Tests include noise, light and vibration.

PRODUCT CERTIFICATION AND APPLICATION
SCI-N recirculating isolator is designed only for hazardous (non-radiopharmacy, non-volatile) compounding applications. When volatile hazardous drugs are prepared, the negative pressure recirculating isolator should be ordered with the optional exhaust activated carbon filter and/or should be vented externally. The limitation, however, is that the volatile drugs will be recirculating within the work zone since the fiberglass filters are not able to filter off chemicals efficiently. For other applications, please contact our Application Specialist.

CETA Applications Guide for the Use of Compounding Isolators in Compounding Sterile Preparations in Healthcare Facilities - CAG-001-2005 (Revised December 2008) states that a total exhaust isolator must be used when handling volatile hazardous drugs, hence this is mandatory if a facility is built to comply with CETA guidelines.

Alternatively, a biosafety cabinet Class II B2 (total exhaust) with safe change filters at the exhaust connection should be selected.

It is the sole responsibility of the client to perform their own internal risk assessment with regards to the final system configuration and decide on the appropriate system design. As Esco will not know your final process, we will not be able to act to consult independently. Should you require our advice, Esco offices, distributors, sales agents, and individuals directly or indirectly promoting our products should not be quoted as the final authority in this matter.

Kindly engage with an independent consultant should you need further clarifications.

Both the internal process and pass-through chambers are not able to pass any pressure hold test in-situ according to AGS or ISO 10648-2 or other equivalent international standards.

Particle Containment Integrity and Enclosure Leak Test is tested with a discrete particle counter as per the CETA Compounding Isolator Testing Guide - CAG-002-2006 (Revised December 2008) only. Standards can be obtained directly from CETA.

The system does not use FDA or USP 6 compliant seals in the construction.

As the system is built in compliance with CAG-002-2006, no other test methods are permitted to be used in the validation of this system. It is the sole responsibility of the Esco appointed sales agent to verify system compliance should the system needs to comply with any other international standards.

Clients should perform their internal risk assessment to ensure that the correct unit is purchased fit for their application. As Esco distributes products via independent parties, any misrepresentation of this product complying with standards and specifications beyond what is stated here is the sole liability of Esco sales agent and not covered by our warranty.

Kindly engage with an independent consultant should you need further clarifications.

Streamline® Compounding Isolator (Total Exhaust) provides a sterile environment for handling hazardous drugs. Configured to operate at negative pressure to provide user, product, environment, and cross-contamination protection from exposure to hazards. The negative pressure, total exhaust isolator is suitable for work involving cytotoxic drugs and other hazardous drugs in the healthcare settings.

- H14 filters with a typical efficiency of >99.995% at 0.3 microns provide superior ISO Class 5 air cleanliness.
- Robust construction and enhanced safety features qualify the Streamline® Compounding Aseptic Containment Isolator (Total Exhaust) for the most demanding laboratory applications. The isolator is fully assembled and ready to install and operate when shipped.
- Airlock Pass Chamber ensures work zone remains sterile during insertion and removal of items. Equipped with electromagnetic interlock doors facilitated by foot switch for the inner door.
- Esco Isocide™ antimicrobial coating on all painted surfaces minimizes contamination.
- Ergonomically styled sloped front reduces glare and allows for easier reach into the work area with highly rounded edges.

Sentinel™ Gold Microprocessor Control System supervises all functions and monitors airflow and pressures in real-time.

**Horizontal sliding tray prevents operator fatigue during transfer procedures.**

**Safe-change cuff rings permit glove changes with zero risk of contaminating the work zone or pharmacy environment.**

Exhaust Types

SCI Total Exhaust comes with 3 different exhaust configuration: Double Exhaust (Top/Bottom), Single Exhaust –Top, Single Exhaust –Bottom

Bag-In Bag-Out Exhaust Filter at the top allows for safe and convenient filter change.

Filter below work zone filters the contaminated air immediately to minimize possibility of airborne contamination and allows low contamination change of filters.

Foot switch provides hands-free access to opening and closing of the magnetic interlock minimizing operator fatigue during transfer procedures.

Ambient air is pulled through the inlet pre-filter located on top of the isolator. The pre-filter traps large size particles to extend the life of the supply HEPA filter. Air from the top inlet and from workzone is pulled by the main fan, which creates positive pressure on the plenum that creates downflow. Work zone pressure is always higher than the pass-through, to prevent contaminants from entering the workzone through the pass-through.

The downflow filter creates a full unidirectional airflow and particle-free ISO Class 5 environment inside the isolator to protect the work material inside the main chamber and pass-through. Air from the work zone and pass-through is quickly purged by the fans to keep the area clean. The purge is completely exhausted through HEPA filter.

Sharps disposal systems are available as options.

5. Sliding Tray
6. Electrical Outlet at side wall (Code A)
7. Sharp Disposal System (HPI-007)
8. Exhaust ULPA filter
9. Foot Pedal for Inner Door (Optional)
10. Bag-in Bag-out Exhaust Filter
11. Supply Fan
12. Supply Filter, H14
13. IV Bar (Optional)
14. UV Lamp (Optional)
15. Exhaust Filter, H14

Since 1978, Esco has emerged as a leader in the development of controlled environment, laboratory and pharmaceutical equipment solutions. Products sold in more than 100 countries include biological safety cabinets, fume hoods, ductless fume hoods, laminar flow clean benches, animal containment workstations, cytotoxic cabinets, hospital pharmacy isolators, and PCR cabinets and instrumentation. With the most extensive product line in the industry, Esco has passed more tests, in more languages, for more certifications, throughout more countries than any biosafety cabinet manufacturer in the world. Esco remains dedicated to delivering innovative solutions for the clinical, life science, research and industrial laboratory community. www.escoglobal.com.
